COMPREHENSIVE PROTECTION FOR YOUR WEB RESOURCES

The increasing demand for web applications has led to the emergence of numerous specialized companies and independent developers offering a variety of functional solutions. However, in their efforts to meet market needs, many overlook or disregard security considerations. This often results in serious vulnerabilities in applications, posing threats to their operation. The situation is aggravated by the fact that a vulnerable web application can be easily compromised by skilled attackers using nothing more than a standard web browser

The challenge of defending web resources against cyberattacks lies in the fact that these attacks typically occur concurrently with sessions of legitimate users and, in most cases, utilize standard ports. Blocking all traffic at the port level would result in completely cutting off access for all users to web applications, while traditional firewalls prove ineffective due to their limited capabilities in recognizing and filtering HTTP traffic. Therefore, effective protection for web resources is achievable only through the use of specialized software and hardware solutions - Web Application Firewalls (WAF).

With the infoWAF service, Infocom offers a simple and effective solution to protect your web applications. Our service ensures protection against a wide range of threats, including SQL injections, cross-site scripting, session hijacking, and more. It eliminates existing vulnerabilities, ensuring reliable and uninterrupted operation of your online projects. The service operates by analyzing all incoming and outgoing data, filtering harmful requests, and blocking attacks at various levels. Continuous threat database updates maintain high efficiency, enabling rapid response to new attack types and vulnerabilities in today's digital environment.

Benefits of the infoWAF Service:

- Comprehensive protection for your web resources
- Uninterrupted client access to your online services
- Cost efficiency - no need to purchase expensive modern equipment or licenses
- Time savings - focus on strategic planning while we handle your security
- Expert support from Infocom without additional staff training
- 24/7/365 monitoring and incident control
